PROJECTS

Easykhairat

About

Easykhairat An online system for "Khairat Kematian" (death benefit) is designed to streamline the management and distribution of financial aid to the beneficiaries of deceased members.

- Developed a cross-platform web and mobile application to manage and distribute Khairat Kematian (death benefit) funds efficiently.
- Built and integrated backend services in Laravel with a responsive Flutter front-end for seamless user experience.
- Implemented secure authentication, beneficiary management, and automated financial aid distribution workflows.
- Ensured scalability and maintainability through clean code architecture and optimized database design.

Masjid Negeri Pahang Website

About

corporate-style platform developed to provide official information, announcements, and religious activities of the state mosque. Built using WordPress, the website serves as an accessible hub for visitors to learn about prayer schedules, events, community programs, and mosque services. The project focuses on creating a modern, user-friendly interface that reflects the mosque's identity and enhances engagement with the community.

- Developed and maintained the website's front-end and back-end using WordPress.
- Customized WordPress themes and plugins to meet design and functional requirements.
- Managed content structure, including posts, event updates, and announcements.
- Optimized website performance, accessibility, and SEO for better visibility.
- Ensured responsive design and cross-device compatibility for all users.
- Collaborated with the team to align design and functionality with organizational goals.
